

CMC SOLUTIONS

To make glazes brushable, add 1.5% dry CMC to 100% dry glaze and mix well dry before adding water.

| | |
|---------|-----------|
| 100 gr. | Dry glaze |
| 1.5 gr. | CMC |
| 70 ml. | Water |

For CMC Solutions, add CMC to water and mix or shake in a closed container to submerge the CMC powder in water.

Let stand for 24 hours and then mix to a creamy, smooth state.

This is used as a glaze and stain binder. It can be thinned with double the water to make a spritzing solution to harden a glaze surface for on-glaze brush painting surfaces such as Majolica painting.

1 gallon batch

| | |
|-------|-----------|
| CMC | 300 grams |
| Water | 1 gallon |

1 pint batch

| | |
|-------|----------|
| CMC | 38 grams |
| Water | 1 pint |

100 ml. batch

| | |
|-------|---------|
| CMC | 8 grams |
| Water | 100 ml. |
